SPS

SCAPHOID PROTECTION

KNOX 

ORIGINAL EQUIPMENT

SCAPHOID PROTECTION SYSTEM.

Scaphoid injury is the most common hand injury caused by the grab effect when the palm of the hand makes contact with the ground. Knox patented the SPS (scaphoid protection system) which for the first time gave riders effective protection against common scaphoid injuries caused by either a compression fracture or by hyper extension.

The Knox SPS is a clever system that works by attaching 2 parts to the palm of the glove, making a bridge over the scaphoid. These plastic parts act as a slider eliminating the grab effect and scaphoid injuries. This has proven to be a very effective system for riders with no loss of flexibility, discomfort or interference with the controls when operating the bike.

Many thousands of riders continue to benefit from this important innovation to their gloves.

Knox SPS is patented technology under the following Patents No: EP1594378 & US8671463

Protective Glove. Planet Knox Ltd.

There are 4 designs of SPS in the collection. Every styles ensures excellent performance on the palm of a glove provided they are placed correctly. Positioning of the parts are checked and approved by Knox prior to first production.

SPS

| DESCRIPTION | PART NO | CE INFORMATION |
|--------------------------------------|---------|-----------------------------------|
| LOW PROFILE V2 | 302 | PASSES CE AS PART OF A GLOVE TEST |
| SPORT V2 | 301 | PASSES CE AS PART OF A GLOVE TEST |

DESIGNED IN THE UK. MADE AND SHIPPED FROM CHINA

SPORT SPS PART 301

The SPS Part 301 is made from soft LDPE, with a hexagon design and angular design aesthetic, more suited to sportier gloves. This soft flexible SPS ensures rider comfort. A softer more flexible sewing edge for easier production and add durability. THIS PART CAN ONLY BE APPROVED AS PART OF GLOVE CE CERTIFICATION

LOW PROFILE SPS PART 303

The new SPS Part 303 is made from soft LDPE with a rounded design and attractive hexagon design aesthetic, more suited to glove designs which require a low profile look and feel. A soft flexible edge ensures rider comfort. A softer more flexible sewing edge for easier production and add durability. Size and style is suitable for both men's and women's gloves.

Each set supplied with 4 pieces and Instruction booklet THIS PART CAN ONLY BE APPROVED AS PART OF GLOVE CE CERTIFICATION.

SPS IMPACT PART 403 – HALF WRAP

The SPS Impact incorporates Micro-Lock impact protection into a new SPS shell made in durable LDPE. Comes in 2 styles, Full Wrap and Half Wrap. These 2 high performance technologies work in synergy to give the benefits of scaphoid protection with added shock absorption. MICRO-LOCK technology is displayed through a small visibility window. 1 piece of the Part 403 is positioned below the thumb and a second pad wraps discreetly around the palm. A soft flexible edge improves rider comfort. A softer more flexible sewing edge for easier production and add durability. THIS PART CAN ONLY BE APPROVED AS PART OF GLOVE CE CERTIFICATION

SPS IMPACT PART 404 – FULL WRAP

The SPS Impact incorporates Micro-Lock impact protection into a new SPS shell made in durable LDPE. Comes in 2 styles, Full Wrap and Half Wrap. These 2 high performance technologies work in synergy to give the benefit of scaphoid protection with added shock absorption. MICRO-LOCK technology is displayed through a small visibility window. 1 piece of the Part 404 is positioned below the thumb and a larger second pad wraps around the palm to give maximum protector around the edge of the hand. A soft flexible edge improves rider comfort. A softer more flexible sewing edge for easier production and add durability.

THIS PART CAN ONLY BE APPROVED AS PART OF GLOVE CE CERTIFICATION.

Each set supplied with 4 pieces and Instruction booklet.
